15 year lease

Facility Use

Child Development Center and Day Care

Description

Permanent modular

Grade level entries

Steel construction

Architectural metal siding, mansard and canopy

Completion

165 days

Permanent
Modular
Construction

Located on the bank of the Mississippi River in New Orleans, LA this 8,065 square foot daycare center was developed on a long-term lease to provide full-day childcare for the children of the local Army Corp of Engineers employees. As a design-build permanent modular construction project, extensive civil design and site development were required to bring the land up to a useable status. The facility features all steel construction, architectural metal siding, an integrated entry canopy, and a full playground. This building was one of the few in the greater New Orleans area to survive Hurricane Katrina intact.
