Description

Wood and steel frame-work

Brick exterior

Concrete stemwall

foundation

Completion

150 days

Permenant
Modular
Construction

When the San Antonio Federal Credit union wanted to locate a fully-automated ATM facility on the grounds of the local Veterans Administration property, the only legal solution was to choose a permanent modular building. Located in the heart of San Antonio, TX this 4,200 square foot facility was designed with a brick masonry exterior integrated to match the existing architecture of the area. One of the first "all-ATM" facilities to be built nationally, the project requirements called for full site-development, wood and steel construction, and a project timeline of 150 days.
