Double-court
gymnasium

Completion

13 months

Steel
Building
System

As part of a district-wide multi-building expansion project for the Seminole ISD, Ramtech added a multipurpose gymnasium, an elementary school classroom wing, and a new maintenance facility utilizing steel building systems for all three projects. The gymnasium is connected by a corridor to the main high school campus structure and was designed to match the architecture and interior and exterior finishes of the existing building. The gym area contains basketball and volleyball courts along with a gymnastic runway on a cushioned suspended wood floor playing surface. The interior also includes a large split level lobby area, girls and boys dressing rooms, weight training room, coaching offices, concession area, and public restrooms.
